

# VERTICAL

Vertical bedhead

The **VERTICAL bedhead** is a hospital bedhead designed to respond to the highest aesthetics and functionality requirements, becoming another architectural element of the environment. It is able to integrate the supply of medical gases, electrical, telephone and computer plugs and the call device for nursing assistance, as well as to cast indirect light to the patient's bed.

There are several configurations for these bedheads: they have a standard structure that accommodates one or two Ø38 mm bars for the placement of trays, drawers, monitor or pump supports, etc... Our technical office will adapt the dimensions, colours and final equipment to the specific needs of each project on demand.

Bedhead units
