

REANIVAC 0-30 l/min

Resuscitation backpack

The **REANIVAC 0-30 l/min** emergency equipments have been especially designed for diving in order to provide them extraordinarily flexibility, autonomy and easy-to-use. Our backpack version allows its transport freeing both hands for emergency situations.

REANIVAC I 0-30 l/min allows:

- Oxygen inhalation for recovering patients or to transfer reanimated.
- Oxygen enrichment of the manual resuscitator.

REANIVAC II 0-30 l/min also allows:

- Venturi-effect inhalations through the use of an oxygen bottle as negative pressure source.

TECHNICAL SPECIFICATIONS

REANIVAC I 0-30 l/min is composed by:

- Backpack of 38x48x18 cm size manufactured in polyester with an upper handle and straps in polypropylene, which can be retracted in a pocket with zipper.
